

scanblaster

for MAS 90® & MAS 200®

Why Purchase Expensive Equipment for Your Scanning Needs?

ScanBlaster provides a quick, simple, and cost-effective way to track inventory goods during shipping, receiving, and purchasing by scanning product codes. ScanBlaster is the ideal solution for Manufacturers, Distributors, Importers, Exporters, or any business in need of an inexpensive, yet effective bar code scanning solution for use with the MAS 90® and MAS 200® Bar Code module. ScanBlaster runs on most Symbol-branded or Symbol compatible Palm OS devices with a bar code reader attached, giving you greater flexibility in your choices of hardware. Plus, you can run other Palm OS applications on the same device that runs ScanBlaster.

Integrates with:

- Bar Code Module (required)
- Inventory Management
- Purchase Order
- Sales Order
- Bill of Materials
- Multi-Bin Advanced Distribution

ScanBlaster is perfect for any business in need of an inexpensive, yet effective bar code scanning solution for use with the MAS 90 and MAS 200 Bar Code module.

Everything You're Looking For – Low Cost, But High Quality

ScanBlaster integrates with the MAS 90 and MAS 200 Bar Code module, and can be integrated with Inventory Management (with or without Job Cost), Purchase Order, Sales Order, and Multi-Bin Advanced Distribution. Employees simply scan codes on purchase order sheets, sales order sheets, picking sheets, and inventory items, alleviating manual entry, eliminating errors, and providing quicker service. For example, a warehouse employee can quickly pull inventory items for orders without delaying shipments because of data entry into MAS 90 or MAS 200. Instead of updating the MAS 90 or MAS 200 system after each item in an order, workers scan the information and upload the data into MAS 90 or MAS 200 as needed. All data on the Palm OS device is synchronized with MAS 90 or MAS 200 in just minutes – and there is no need to process inventory, purchase orders, and sales orders separately.

Plus, **it is proven to be less expensive** to use a Palm OS handheld scanning device rather than purchasing expensive bar code scanning equipment!

ScanBlaster

for MAS 90® & MAS 200®

Features and Benefits

Our enhancements truly do “enhance” your MAS 90 or MAS 200 system, no matter what your business does. Check out what ScanBlaster can do for you!

Ease of Use and Cost-Effective

- Gives you greater flexibility and choice of hardware for half the price of similar solutions. Requires Palm OS 3.5 or later with at least 2MB RAM.
- Eliminates manual data entry, which can be error-prone and time-consuming.
- Data imports into your MAS 90 or MAS 200 system during synchronization.
- Allows you to conduct a wide range of transactions through MAS 90 or MAS 200 on a Palm OS device including:
 - Inventory Management – Physical Counts, Issues, Transfers, Receipts, Sales
 - Sales Order – Invoices
 - Purchase Order – Receipts
 - Bill of Materials – Assembly, Disassembly
- Users may also utilize the Palm OS device to run other applications in addition to ScanBlaster, including Remote Salesperson and Timekeeper.

Enhance Multiple MAS 90 or MAS 200 Modules

- ScanBlaster integrates with the following MAS 90 and MAS 200 modules:
 - Bar Code (required)
 - Inventory Management (with or without Job Cost)
 - Sales Order
 - Purchase Order
 - Bill of Materials
 - Multi-Bin Advanced Distribution

The Solution for You

- ScanBlaster is the perfect tool for Manufacturers, Distributors, Importers, Exporters, or any business in need of a cost-effective bar code scanning solution.
